How it works?

01. **The administrator sets the zones and users.**
The user receives an email with link or scans a QR code or types the code manually.

02. **The card is not needed anymore.**
From now on, just approach the door or gate and your phone opens it.

03. **Invite your guests.**
If a user wishes sets up a meeting or just wants to invite a guest, he just types the guest's email and defines date, time and room. Thanks to this feature, the guest will be able to conveniently park a car and arrive in the meeting room. The invitee receives a notification, that the guest has arrived.

04. **Software integration.**
The system and mobile app can be integrated with any other modules and software in the building. It reduces the workload for the staff and allows for energy savings and more.

05. **Communication and notifications.**
Enhance the experience with your space, by sending out reminders about the events or push notifications like "Please contact the front desk to pick up your package".

Innovative opportunities

✳ Modern space for the tenants and their guests, room bookings and much more.

✳ Communication – notifications, **reminders, info from the management**.

✳ Fully scalable system, adjustable to the users and management requirements, possible to expand gradually and to add more software components.

✳ Monitor statistcs, learn the habits and preferences of your tenants and adjust your space accordingly. **Increase incomes by raising the effectivens of the space usage**.

✳ Offer new products for your clients like for example buy access via webpage and download the app to enter the space.

Is it convenient?

Everything in one place

Access to rooms and offices in different locations, garage gates, bars, important notices sent as push notifications – everything in one, intuitive mobile app.

Easy account management

Grant or revoke access rights anytime – sold or stolen phone, change of tenants, technical staff, part-time employees.

Is it safe?

High security level transmission

Bilateral encryption ensures very high security of the connection. No worries, that the data will be stolen, intercepted or other incidents will be happening.

Administrator and users control the access rights

Possible to define who has the right to invite guests and to which rooms, check the access history and conveniently managing the space.

Yes – it is a safe and handy solution
